

How To Use Our English Slip Leash

An English slip leash is a simple yet effective tool for walking and training your dog. It combines a collar and leash in one piece, making it easy to put on and take off while providing excellent control. There are two ways that your dog can wear the leash. One way is a great way for slipping on and off while the other offers a little more control.

Standard:

The standard way is a simple way to gear up your dog for a walk. Follow these steps to properly leash your dog:

1. Place Loop

Using the adjustable locking stopper, create a large loop big enough for your dogs head. Then place the loop around your dogs neck.

2. Tighten Loop

Using the adjustable locking stopper, tighten the leash to securely fit around your dogs neck. Now go enjoy your walk!

Muzzle Control:

The muzzle control style helps prevent yanking on the leash. When using this style on your dog make sure the leash is tight enough to stay securely on your dogs head without them being uncomfortable.

1. Place Loop

Using the adjustable locking stopper, create a large loop that can fit around your dogs head. Then place the loop around your dogs neck.

2. Twist Loop

With the loop you just created, twist the loop to create a figure-8 beneath your dogs snout.

3. Tighten Figure-8

Place the smaller part of the figure-8 over your dogs snout. Using the adjustable locking stopper, tighten the leash so it securely fits around your dogs neck. Now go enjoy your walk!
